

## 1 Set Up

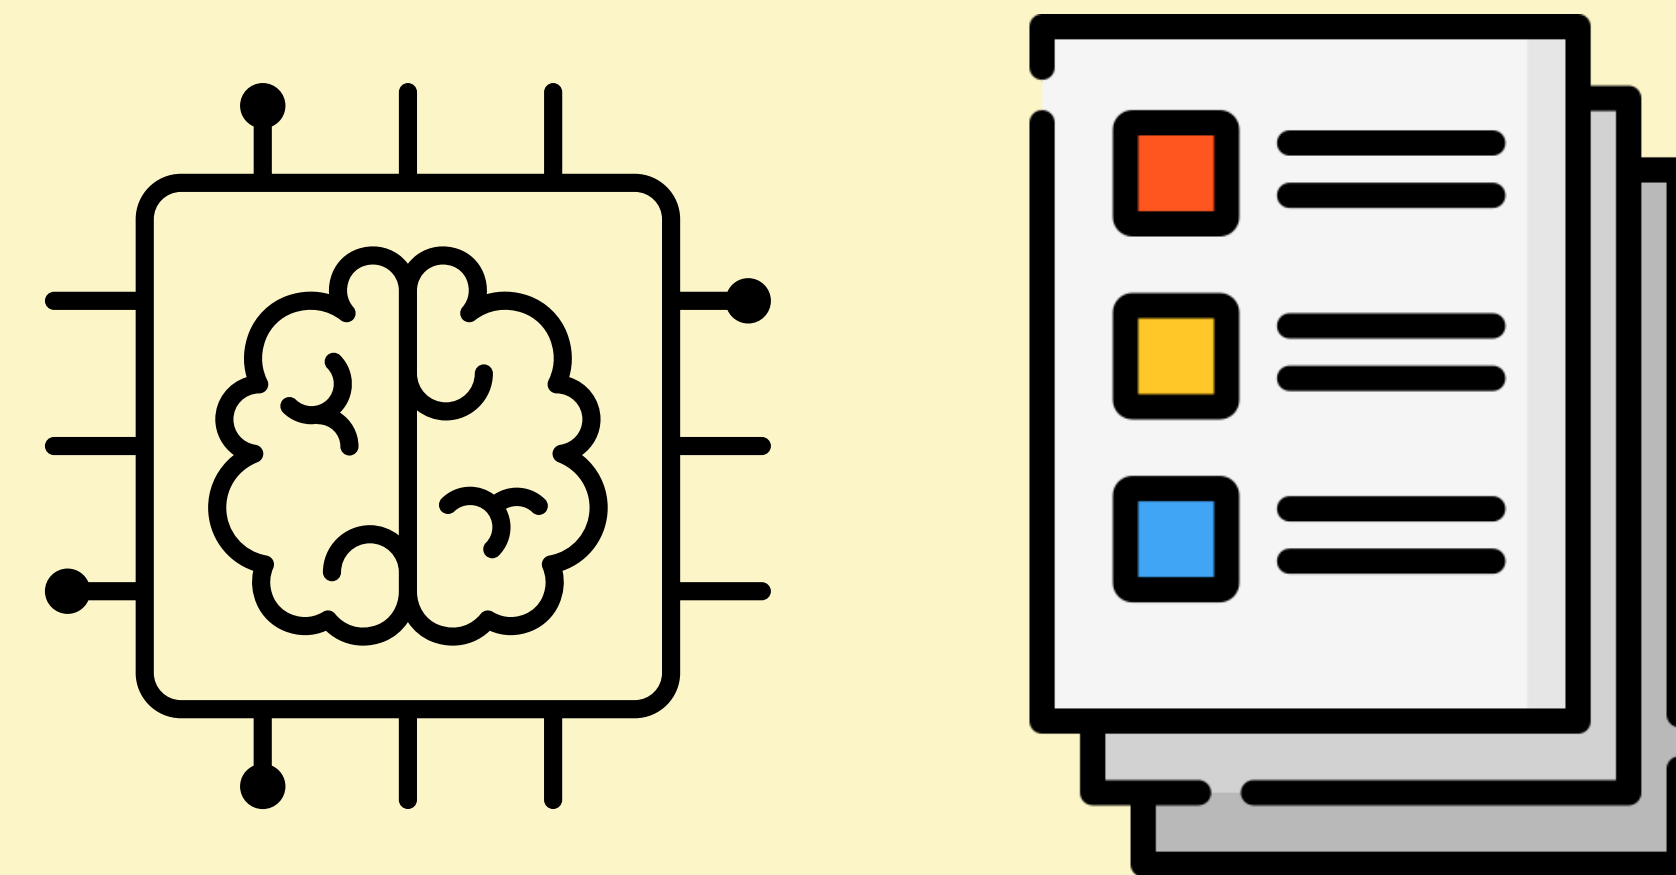

Create a project from codebook and data

- Upload codebook
- Add optional data
- Configure task settings

## 2 Generate

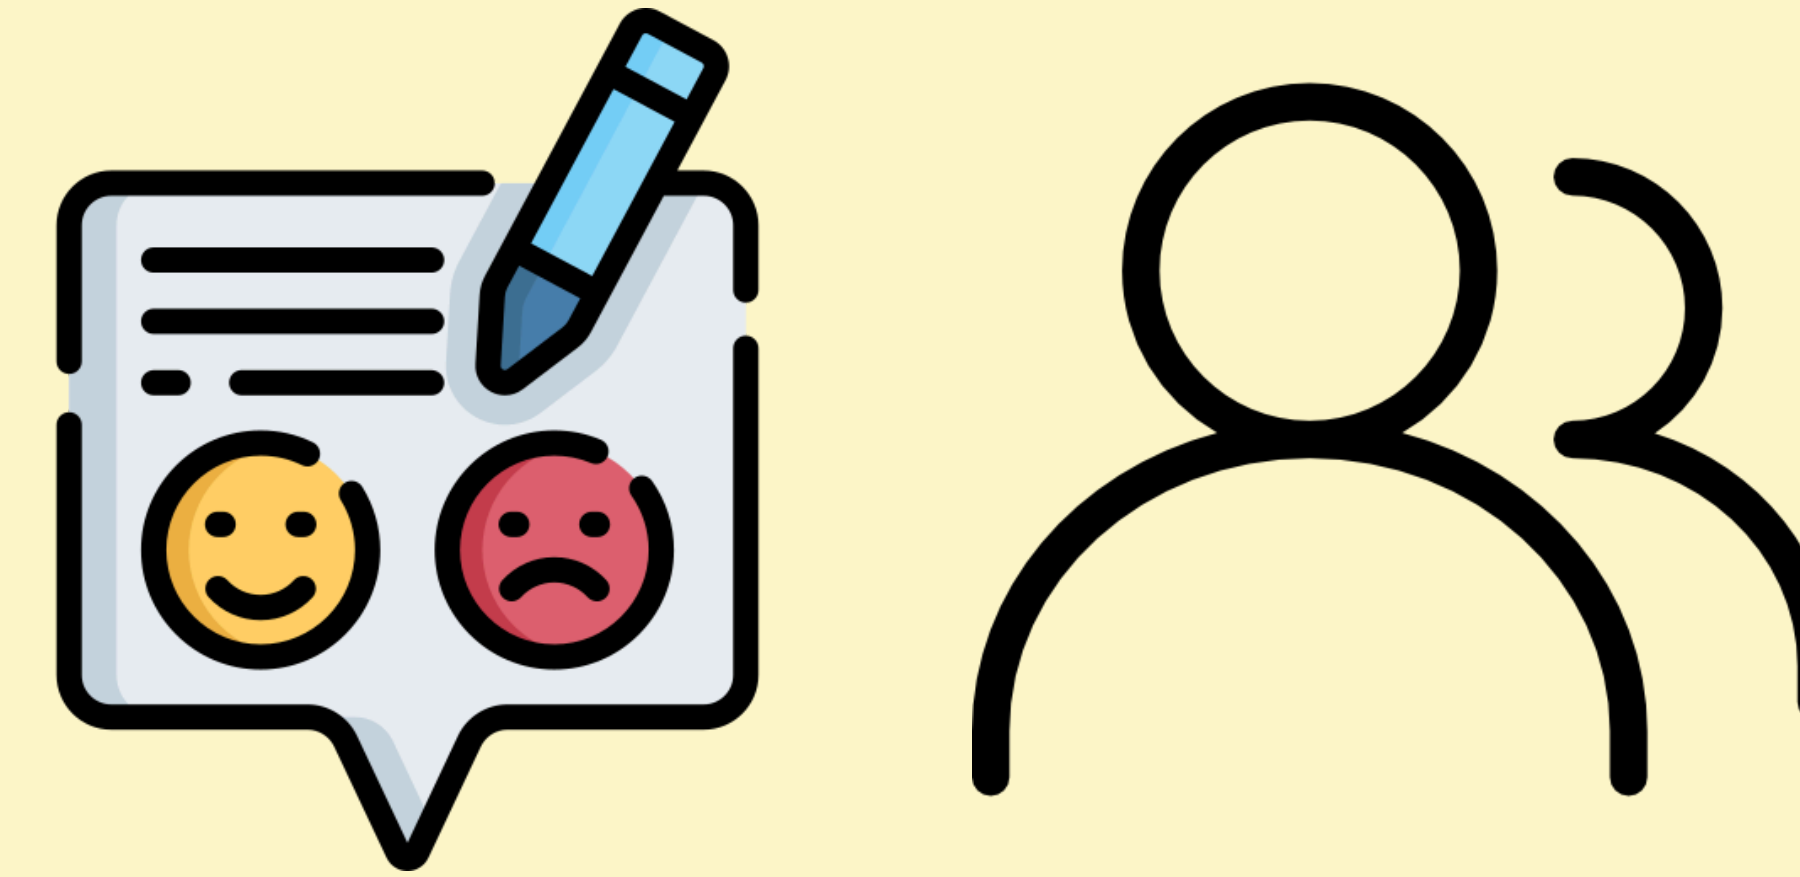

Parse the codebook and run draft annotation

- Structured codebook schema
- Dimension-specific prompts
- Draft labels

## 3 Refine (optional)

Inspect outputs and improve prompts

- Human feedback
- Prompt optimization
- Versioned prompt updates

## 4 Export Results

Run final annotation and export labels

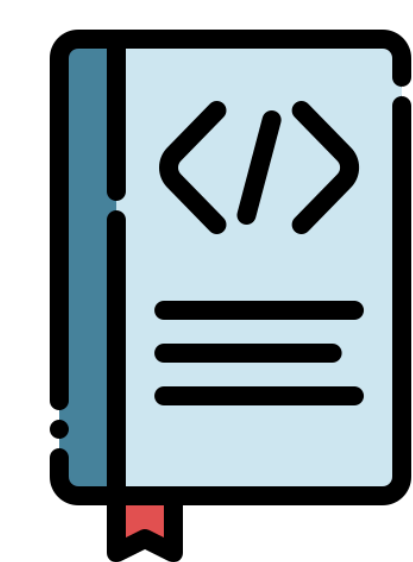

- Review outputs
- Final labels
- CSV / JSON export

CALICO

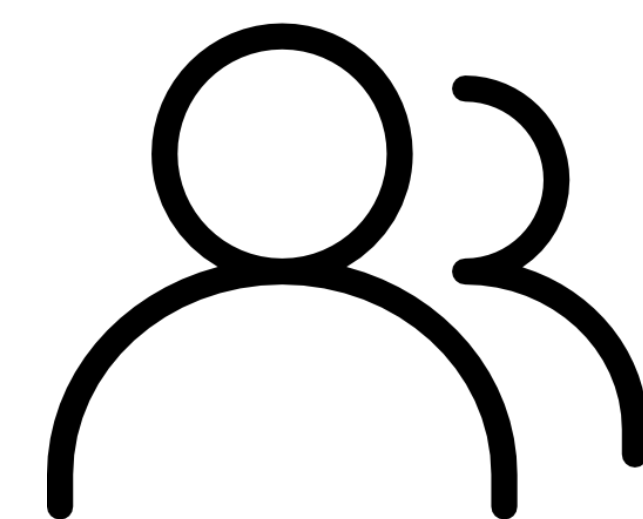

### Iterative prompt refinement

Feedback or labeled examples improve the prompts over time.

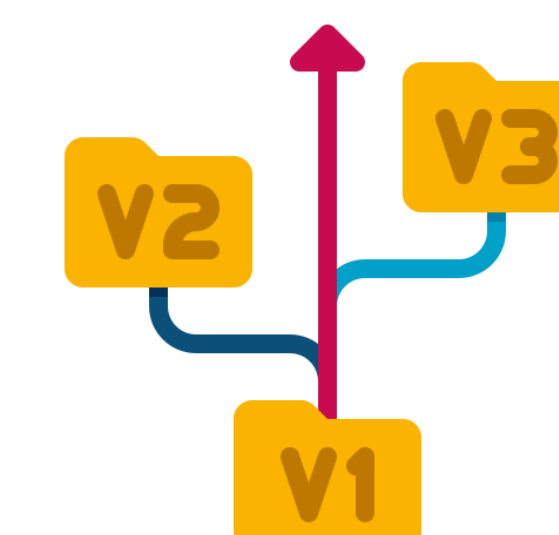

### Codebook-Aligned

Structured parsing ensures alignment with users' codebooks.

### Human-Centered

Human feedback guides continuous improvement.

### Versioned Prompts

Track prompt changes and iterate.

### Easy Export

Export final labels in CSV or JSON format.
